Stages of Listening to Sound

Children with hearing loss that are using cochlear implants or hearing aids need help learning to listen. Everyday routines within the classroom are perfect for learning and making sound-object connections. Knowing the stages of listening can help teachers support children with learning to listen.

Try the strategies below to help the child build awareness of sounds, identify the sounds, and comprehend the sounds during playground time.

Awareness	Identification	Comprehension
Teacher helps me notice a sound by pointing to it and naming it.	I know what the sound is.	I notice, understand, and respond to the sound.

Sound Awareness	Sound Identification	Sound Comprehension
Try saying these things when on the playground:	You know this is happening when:	You know this is happening when:
"I heard the gate close, bang."	The child looks at the gate.	The child might point and say, "close."

"I heard the child cry, uh-oh."	The child looks at the crying child.	The child might point and say, "uh oh" or "ouch."
"I heard the birds, chirp chirp."	The child looks at the birds.	The child might point and say, "bird" or "chirp."
"I heard the teacher say, "line up."	The child looks at the teacher.	The child might point and say, "all done" or "in."
"I heard your friends running."	The child looks at other children.	The child might point and say, "play" or "fast."
